Introduction

This report contains statistical estimates related to pronghorn antelope hunting effort and harvest success, and the characteristics of antelope harvested in Montana during license year 2003 (LY2003). It is based on an analysis and summary of the LY2003 statewide **Antelope Hunting and Harvest Survey** conducted following the antelope hunting season. Statistical estimates of the number of antelope hunters, number of days devoted to antelope hunting, number of successful antelope hunters, and number of antelope harvested are presented, as are relevant ratios such as percent success, and distributions of harvest by sex/age class and time period. Statistics are presented by **Location hunted** (Statewide, FWP Region, and Hunting District), by **Residency of hunter** (Residents, Non-residents, and Combined) and by the antelope **License/Permit Type (L/P Type** or **Lpt**) associated with the hunting effort or harvest success (individual Lpt, lumped groupings of Lpts, and all combined). Confidence bounds at the 80% significance level are presented for key statistics. Counts of antelope license sales and expansion factors used are presented.

Estimation of Antelope Hunting and Harvest Statistics

The results presented in this report are based on a survey of LY2003 antelope license/permit type holders. (See the enclosed **2003 Antelope Hunting and Harvest Survey** questionnaire.) The **2003 Harvest Surveys Sportsperson/License Database** (as of January 11, 2004) provided the source of information regarding resident and non-resident sportspersons having some privilege to hunt antelope. Antelope hunting privileges are conferred through **special licenses**, awarded via special drawings, or sold over-the-counter. There is no antelope general license. Special antelope licenses confer specific antelope hunting privileges in specific hunting areas. During a given license year a hunter may hold more than one special license, and may harvest one antelope with each special license held, subject to the restrictions associated with the license. Antelope special licenses are uniquely identified by a 5 digit code. (See the enclosed **2003 Hunting Regulations: Deer-Elk-Antelope** booklet.). In LY2003, there were **107 antelope special licenses issued** and used in unique ways to manage antelope in Montana.

Antelope special license holders were randomly sampled from the 107 special license subpopulations using a variable sampling rate method intended to insure a minimum response rate by Lpt. Attempts were made to contact and survey all those sampled. Montana resident antelope sportspersons were surveyed primarily by phone, while non-residents were surveyed by mail. Contact labels were generated for **65%** of resident antelope license holders, and **82%** of non-resident holders. The overall resident survey return rate was **72%,** while the non-resident rate was **65%**. The resulting effective overall response rates, relative to numbers of known antelope holders at the time of analysis, were **47%** for residents and **53%** for non-residents.

The antelope survey allows hunting effort to be reported as days or partial days spent antelope hunting (Hunter Days) for each Hunting District in which effort was expended. Antelope harvest is reported by Hunting District of kill, sex-age class (unknown, fawn, doe, buck), and time period of kill (unknown plus 6 date intervals corresponding to pre-season, 4 weeks of the standard hunting season, and post-season).

Hunting and harvest information from survey responses is summarized by Location and Residency of hunter. The response data alone does not contain information regarding the specific antelope L/P Type (Lpt) the hunter used to hunt or harvest antelope. This is inferred based on merging information from three separate information sources:

- The reported District of hunting effort, and characteristics of the antelope harvested for successful hunts, as provided by the **Survey Response Database.**
- The set of antelope special licenses held by the given hunter, as provided by the **Sportsperson / License Database.**

- The management use of each antelope special license, including valid District(s), time period(s) of use, and sex-age class allowed, as provided by the **License/Permit Information and Regulations Database**.

Each reported antelope **harvested** is linked to a special license held by the hunter AND legally valid in the reported kill District AND valid for the reported sex-age class and time period of the antelope kill. **A given reported antelope kill may be validly linked to only one special license.** A hunter's buck kills are compared to his/her held licenses before doe kills, which are compared before fawn kills. The hunter's either sex licenses valid in the reported District are compared before his/her valid doe/fawn licenses. In this fashion a hunter's multiple reported kills are linked to the pool of valid special licenses held, each reported kill being linked to one special license. If an antelope kill cannot be linked to a license held by the hunter, it is assigned to an **Unknown** Lpt category (coded as 99999). This may occur if the hunter held no licenses valid in the reported District, reported a kill which did not match the requirements of any of the valid licenses held, or the available valid license(s) had already been linked to another kill. (The hunter reported more antelope harvested than valid licenses held.)

Each reported antelope harvested is associated with reported hunting effort in the District of kill. More than one kill may be associated with the effort reported in a District. **Reported effort in a District associated with harvest (successful effort) is linked to the special license(s) linked to the kill(s) reported from the District.** If more than one kill is reported by a hunter in a District, the reported effort is linked to the special licenses of all kills, each weighted so the total weights of all licenses associated with the effort in the District equals one. (For example, if three kills are reported in a District, the Lpts linked to each kill will also be linked to the effort in the District, and each receives a relative weight of 1/3.)

Reported hunter effort in Districts were no success harvesting an antelope was reported (unsuccessful effort), is linked to all the special licenses held by the hunter and valid in the reported District. If the hunter held multiple valid licenses, then the effort in the District is split among the valid licenses and weighted so the total weights of all licenses associated with the effort in the District equals one. If reported unsuccessful antelope hunting effort in a District cannot be linked to a valid special license held by the hunter, it is assigned to an **Unknown** Lpt category (coded as 99999).

After all records of antelope hunting effort and harvest success are linked to special licenses held by the antelope hunters, then **the modified hunting and harvest response information is summarized by the 3 identifying variables Location, Residency, and License/Permit Type.** Each of these variables may be grouped at various meaningful levels:

1. **Location of Hunting Effort and Harvest Success (Loc):**

- **Statewide (State):** Hunting and harvest information is summarized without regard to District of kill.
- **Region (Reg 1…Reg 7, Reg U):** Hunting and harvest information is summarized based on the FWP administrative Region of the District of kill. (See enclosed **Regulations booklet**.) Hunting and harvest information in an unknown Region is lumped into Reg U (coded as Reg 9).
- **Hunting District (100..799, 999):** Hunting and harvest information is summarized based on the reported FWP Antelope Hunting District. Activity in an unknown District in a known Region is reported with the Region number followed by 'XX' (1XX…7XX, coded as 199..799). Activity in an unknown District and Region is reported as 9XX (coded as 999).

2. **Residency Status of Hunter (Res):**

- **Combined (ALL):** Hunting and harvest information is summarized without regard to residency of hunter.
- **MT Residency Status (Resident=R, Non-resident=N):** Hunting and harvest information is summarized by residency status of hunter.
- **Sum of Both Residencies (SUM):** Hunting and harvest information for residents and non-resident is summed (within a given Location and Lpt). There is no difference between summarized raw response

data for Res=ALL and Res=SUM. There may be a difference between the estimate obtained when residency is disregarded (**Res=ALL**) versus the estimate obtained by summing the resident and non-resident estimates (**Res=SUM**).

3. **License/Permit Type used to Hunt or Harvest (L/P Type or Lpt):**

- **Combined (ALL):** Hunting and harvest information is summarized without regard to the Lpt used.
- **License Category (Either Sex, Doe/Fawn, ArchOnly, Unknown):** At the State and Regional Location levels, hunting and harvest activity is summarized by grouped categories of the individual L/P Types. **Either Sex** (abbreviated Eith Sex in tables, coded as C1SES) groups activity linked to all either sex special licenses, excluding the Multi-Regional Archery Only either sex license. **Doe/Fawn** (coded as C2SDF) groups activity linked to all doe/fawn special licenses, excluding the Multi-Regional Archery Only doe/fawn license. **ArchOnly** (coded as C3SAO) groups activity linked to both Multi-Regional Archery Only special licenses, either sex and doe/fawn. **Unknown** (coded as C9UNK) groups all activity linked to an unknown Lpt (99999).
- **Specific L/P Type subpopulation (ES-#####, DF-#####, AO-#####, Unknown):** At the Hunting District Location level, hunting effort and harvest success is summarized by the linked individual special licenses. See **Appendix A** for a listing of all special licenses, their 5 digit codes, and their management uses. Also see the **2003 Regulations** booklet. **Lpts 21500-70030** are either sex and doe/fawn special licenses issued for management purposes in a District or localized set of Districts. **Lpts 90000 & 90030** are special Multi-Region archery only licenses allowing either sex and doe/fawn harvest, respectively, in most antelope Districts statewide. Either Sex, Doe/Fawn, and Archery Only Lpts are distinguished in the report tables by the prefixes "**ES-**", "**DF-**", or "**AO-**". **Unknown** (coded as 99999) indicates effort not assignable to a special license held by the hunter and valid in the reported District, or harvest not matching the sex/age or time period restrictions of the held licenses.
- **Sum of estimates by individual L/P Type or License Category (SUM):** Hunting effort and harvest success is summed across all linked Lpts, within a given Location and Residency. There is no difference between summarized raw response data for Lpt=ALL and Lpt=SUM. There may be a difference between the estimate obtained when Lpt is disregarded (**Lpt=ALL**) versus the estimate obtained by summing the estimates for each underlying Lpt (**Lpt=SUM**). **Estimates of unique hunters and unique successful hunters of a given Residency in a given Location (Hunt, SucHunt), and upper and lower confidence bounds on those estimates, cannot be summed across Lpts**. This is because antelope hunters may hold multiple Lpts and harvest more than one antelope in a District. Hunters and Successful Hunters at the Lpt=SUM level are adjusted to be estimates of numbers of unique hunters among all the hunters holding the underlying Lpts, given the Location and Residency.

Once the reported hunting and harvest information is summarized by Location, Residency, and L/P Type, it is expanded into statistical estimates using antelope harvest expansion factors. **Antelope hunting and harvest expansion factors are based on the number issued (sales) of each special license, divided by the number issued to Antelope Survey respondents (respondent sales).** Sales figures were available for each Lpt by Residency from the LY2003 Sportsperson/License Database. This information was last updated from the FWP Automated Licensing System (ALS) on May 12, 2004. Similarly, the number of respondents holding each Lpt by Residency status is known. Residency of respondents is fixed to that they held at the time of survey sampling in January. From this information, **basic antelope expansion factors are computed by Lpt and Residency**. Expansion factors are then computed for all 3 of the identifying variables, at all levels of grouping of described above, by applying the same general ratio, "Lpts issued to Lpts issued to respondents". The expansion factor used when Lpt is unknown is that derived for Location=State, Lpt=ALL, for a given hunter Residency. **Expansion factors are applied to summarized reported hunting and harvest statistics to obtain expanded statistical estimates and confidence bounds, for all levels of Location, Residency, and L/P Type.**

After expansion of the hunting and harvest statistics at all levels of the 3 identifying variables, sums of estimates across Residency, across L/P Type, and across both, were generated within each level of Location. These sums of estimates across Res and Lpt (**Res=SUM &/or Lpt=SUM**) offer an alternative to the "without regard to" Res and Lpt estimates (**Res=ALL &/or Lpt=ALL**).

The statistical precision of an antelope hunting or harvest estimate is dependent on the overall response rate (reflected in the expansion factor), and on the level of hunting activity or the number of described antelope kills reported from antelope survey responses, for a given combination of Location, Residency, and L/P Type. A low expansion factor (close to 1) indicates a high response rate, and relatively good statistical precision in the estimate. Good statistical precision is reflected in relatively narrow 80% confidence bounds on the estimate. As the expansion factor increases beyond 1 (as response rate drops) statistical precision declines, and the confidence interval on the estimate widens. A higher level of reported hunting effort or harvest success will result in better statistical precision of an estimate than a lower total reported effort or success. Estimates at higher levels of grouping of the 3 identifying variables (Statewide/Regional, Res=ALL, Lpt=ALL or grouped License Category) lump together more reported activity and kills and therefore generally show better statistical precision than those made at levels where there is less reported activity and fewer kills. Individual Lpt subpopulations with low numbers issued by Residency will have hunting and harvest estimates with generally lower precision than those with higher sales by Residency.

The estimates without regard to Residency (**Res=ALL**) lump responses for both residencies, and therefore achieve a higher level of statistical precision, but at the cost of disregarding real differences between the two subpopulations. The sum of resident and non-resident estimates (**Res=SUM**), within a Location and L/P Type, preserves these differences, but at a cost of lower statistical precision and a poorly defined confidence interval on the sum of estimates.

Similarly, the estimates without regard to L/P Type (**Lpt=ALL**) lump responses over all Lpts, and therefore achieve a higher level of statistical precision, but at the cost of disregarding real differences between the Lpt subpopulations. The sum of individual Lpt estimates (**Lpt=SUM**), within a Location and Residency, preserves these differences, but at a cost of lower statistical precision and a poorly defined confidence interval on the sum of estimates.

Estimates of unique hunters and unique successful hunters of a given Residency in a given Location (Hunt, SucHunt), and upper and lower confidence bounds on those estimates, cannot be summed across Lpts. This is because antelope hunters may hold multiple Lpts and harvest more than one antelope in a District. Hunters and Successful Hunters at the Lpt=SUM level are estimates of numbers of unique hunters among all the hunters holding the underlying Lpts, given the Location and Residency. **The method used to derive these particular estimates was as follows:** The response data linked to the Lpt of hunting activity and harvest success provided counts of unique active hunters and successful hunters for each Lpt. Unique hunter counts could be obtained for any combination of the Lpts having reported use at a given Location and for a given Residency. Increasingly inclusive sets of Lpts were considered in order, Either Sex first, then Archery Only, then Doe/Fawn, then Unknown. The final Lpt set included all Lpts with reported use. The number of new responding active and successful hunters with the addition of each Lpt was noted. From this information the proportion of hunters holding each Lpt which were new hunters could be derived. These proportions were then applied to the expanded estimates of active hunters and successful hunters of the corresponding Location, Residency, and Lpt. These adjusted estimates were then summed across Lpts within each Location and Residency to obtain the expanded estimates of unique active hunters holding the underlying Lpts and unique successful hunters harvesting with the underlying Lpts (Lpt=SUM).

Sales figures, expansion factors, statistical estimates, and confidence bounds, for all computed combinations and levels of the 3 identifying variables, including the Res=ALL and Res=SUM estimates, and the Lpt=ALL and Lpt=SUM estimates, are stored in the Harvest Surveys Hunting and Harvest Statistics Database. (The complete data table of antelope hunting and harvest estimates is available in a comma separated value text file – **see Appendix B.**) However, to preserve simplicity and save space, **the formatted tables presented in this Antelope Hunting and Harvest Report do not list the estimates where Res=ALL or Lpt=ALL**. Rows in the tables identified by **Res=SUM** or **Lpt=SUM** present simple sums of estimates across Residency or across L/P Type, respectively. Lower and upper 80% confidence bounds given in these rows are sums of the confidence bounds across Residency or L/P Type. (With the exception of Hunters and Successful Hunters as described above.) The sum of lower and

upper confidence bounds does not form a true confidence interval around a sum of estimates. It is intended only as an indicator of the possible statistical variability in a sum of estimates. The true confidence interval of a sum of estimates may be wider than the interval obtained by a simple sum of lower and upper bounds on the summed estimates.

Comments on 2003 Antelope Hunting and Harvest Analysis

The analysis methods used to compute the LY2003 antelope hunting and harvest statistics were those used in LY2002. LY2002 analysis was revised to more closely align analysis with current antelope special license sales and management use practices. Previous antelope analysis routines relied on sales practices which were more restrictive of the number of special licenses which could be held by a sportsperson and the combinations allowed to hunt and harvest antelope. The current routines are designed to more properly interpret a wider variety of antelope sales and management practices.

Phase 2 of the ALS point-of-sale database was activated in LY2003. The system began automatically storing applicant-successful drawing data as well as over the counter (OTC) license sales/issues. All off-line applications and off-line sales were entered into the ALS database, as were all returns and adjustments. Thus the ALS database became the sole source for information regarding Montana resident and non-resident sportspersons and all the licenses and permits they held in LY2003. At the time of survey sampling in early January ALS provides survey contact information, plus the information required to link antelope license holders to a residency status and the set of special licenses they held. Any adjustments to holder and sales information comes from ALS at the time source data files are finalized for analysis in early May. The accuracy of antelope analysis is dependent on the completeness and accuracy of the ALS database at these times.

Organization of Antelope Hunting and Harvest Tables

- **Executive Summary of Antelope Hunting and Harvest Table:** This table is intended to provide a ***bottom line*** **view of 2003 MT antelope hunting and harvest, at each Location** (State, Regional, and by District). Only one row of statistics is presented for each Location, that where the underlying estimates by Residency and L/P Type are summed (**Res=SUM AND Lpt=SUM)**. The tables begin with State and Regional statistics, then continue on to the District level statistics, grouped by Region. Estimates of hunters, hunter days, successful hunters, harvest, and harvest by sex-age class are presented, as are relevant ratios such as percent success.

- **Antelope Hunting Effort and Harvest Success Table:** This table presents basic hunting and harvest estimates (and statistical expansion information), by Location, Residency, and L/P Type. Number issued, expansion factors used, and estimates of unique hunters, total hunter days, unique successful hunters, total harvest, and harvest by sex-age class are given. Confidence interval information for the hunter, hunter day, successful hunter, and harvest estimates are given. Relevant ratios based on these statistics, including percent success, are presented.

- **Antelope Harvest by Time Period:** This table presents estimates of harvest by time period of kill, by Location, Residency, and L/P Type. Estimated total harvest, harvest within 7 time period classes, and percent distribution of harvest by time period class are given.

Definitions of Hunting and Harvest Statistics, Ratios, and Percents

Statistics presented in Hunting Effort and Harvest Success Table:

- **Number Issued:** Number issued (sales) of the given Lpt or Lpt class.
- **Expand Factor (Expansion Factor):** The ratio of the number issued versus the number issued to responding antelope survey respondents, for a given Lpt or Lpt class.
- **Hunters:** Point estimate of the number of unique active antelope hunters.
- **Hunter C.I. %:** The 80% confidence interval on Hunters, expressed as the percent by which the estimate differs from the upper confidence bound on the estimate.
- **Hunter Days:** Point estimate of cumulative number of days or partial days spent hunting antelope by active hunters.
- **HDays C.I. %:** The 80% confidence interval on Hunter Days, expressed as the percent by which the estimate differs from the upper confidence bound on the estimate.
- **Days/Hunter:** Ratio of Hunter Days to Hunters. An estimate of the average number of hunter days spent hunting by antelope hunters. A measure of hunting effort.
- **Success Hunters (Successful Hunters):** Point estimate of number of unique active hunters harvesting one or more antelope.
- **S Hunt C.I. %:** The 80% confidence interval on Successful Hunters, expressed as the percent by which the estimate differs from the upper confidence bound on the estimate.
- **Pcnt Succes (Percent Success):** Ratio of Successful Hunters to Hunters, expressed as a percent. An estimate of the percent of active hunters harvesting one or more antelope. A measure of hunting success.
- **Harvest:** Point estimate of total number of antelope harvested.
- **Harv C.I. %:** The 80% confidence interval on Harvest, expressed as the percent by which the estimate differs from the upper confidence bound on the estimate.
- **Hunter / Kill:** Ratio of Hunters to Harvest. An estimate of the average number of active hunters needed to harvest an antelope. A measure of hunting success.
- **Days / Kill:** Ratio of Hunter Days to Harvest. An estimate of the average number of hunter days required to harvest an antelope. A measure of hunting success, standardized to hunting effort.
- **Kill Unkn:** Estimate of harvest of sex age class unknown.
- **Kill Fawn:** Estimate of harvest of sex age class fawns.
- **Kill Doe:** Estimate of harvest of sex age class does (non-fawn females).
- **Kill Buck:** Estimate of harvest of sex age class bucks (non-fawn males).
- **Pcnt D/F (% Doe/Fawn):** Estimate of the percent of harvest of sex age classes Doe and Fawn.
- **Pcnt Buck:** Estimate of the percent of harvest of sex age class Buck.

Statistics introduced in the Harvest by Time Period Table:

- **Time Unkn:** Estimate of harvest where time period was unknown.
- **Before Oct 12:** Estimate of harvest during 1st time period, pre-season.
- **Oct 12 – Oct 19:** Estimate of harvest during 2nd time period, 1st week of general season.
- **Oct 20 – Oct 26:** Estimate of harvest during 3rd time period, 2nd week.
- **Oct 27 – Nov 2:** Estimate of harvest during 4th time period, 3rd week.
- **Nov 3 – Nov 9:** Estimate of harvest during 5th time period, 4th week.
- **After Nov 9:** Estimate of harvest during 6th time period, post-season.
- **Pcnt Pre:** Estimate of percent of harvest during pre-season.
- **Pcnt Wk 1:** Estimate of percent of harvest during 1st week of general season.
- **Pcnt Wk 2:** Estimate of percent of harvest during 2nd week.
- **Pcnt Wk 3:** Estimate of percent of harvest during 3rd week.
- **Pcnt Wk 4:** Estimate of percent of harvest during 4th week.
- **Pcnt Post:** Estimate of percent of harvest during post-season.

Notes Applying to Antelope Hunting and Harvest Tables

- **Undefined, missing, or not applicable values are presented in the report as –0.0 or -0.** Undefined expansion factors (-0.000) occur when there are no respondents at a combination of the 3 identifying variables. All estimates of hunting and harvest based on an undefined expansion factor are also undefined (-0). Undefined ratios and percents occur when the denominator of the ratio is zero. This can occur when response data indicated no hunting or harvest. Rows where Res=SUM or Lpt=SUM do not have expansion factors. They are sums of existing estimates with defined expansion factors. The expansion factor is not applicable to these rows (–0.000).
- **Out of range values are indicated with #####.** These occur when the numerator of a ratio, relative to the denominator, is so large that the ratio is essentially meaningless.
- **The sum of presented underlying values may appear to differ slightly from a presented overall total value.** For example, the sum of harvest across Lpts versus the value of harvest for Lpt=SUM. Other examples are harvest versus the sum of harvest across sex age classes or time period of kill classes. All estimates are computed and stored in the underlying database as high precision floating point real numbers. However, in the report they are presented as whole numbers. The sum of the presented rounded values may not appear to exactly equal the presented rounded total value. Further summarizations or calculations based on the rounded values presented in the report will show round off error and lack the precision possible using the actual underlying estimates. A data file of antelope hunting and harvest statistics is available which retains much of the underlying precision of the estimates. (See **Appendix B: Antelope Hunting and Harvest Data File Description.**)
- **Regarding the Time Period of Kill Table.** If the harvest estimate is zero for a particular combination of the 3 identifying variables, then that row was not output to this tables.
- **The page numbers** in the lower right hand corner of each page indicate the consecutive page number in the report. The page numbers in the upper right of each table title header indicate a page within a given table. Each table will have numbered consecutive pages.
- **The date August 17, 2004** printed in the table titles and throughout this report indicates the date the presented estimates of LY2003 antelope hunting and harvest statistics were generated. This provides a version stamp in the event the statistics are regenerated at a later date using altered source data or modified analysis techniques.

The 2003 Antelope Hunting Regulations Table

Reported antelope hunting activity and antelope harvest descriptions were linked to antelope license/permit types as described above. This linkage was based on matching the reported District of hunt, and District of kill and kill description of successful hunts, to the Lpt(s) held by the responding antelope hunter, and checking if the District, sex/age characteristics, and time period of kill conformed to the management usage of the Lpt as defined in the **Antelope Hunting Regulations Data table (Appendix A)**. Specific Antelope Lpts are identified by 5 digit codes as described above.

For each **hunting District**, valid usage of each **license/permit type** is defined by the following variables:

- **Date_Bgn:** The date the season opened.
- **Date_End:** The date the season closed.
- **Means of Take:** Some combination of **R**ifle, **A**rchery, **M**uzzleloader, and/or **S**hotgun.
- **Sex-Age:** The legal sex/age class of antelope allowed by the license or permit.
  - **Either Sex (E0):** Any Antelope is legal.
  - **Doe/Fawn (E1):** Antelope must have horns less than 4" in length.
- **Regulation Description:** Information describing the Lpt and the specific management opportunity granted by the Lpt.
- **Regulation Comment:** Further information specific to the Lpt and its use.

Appendix B: The 2003 Antelope Hunting and Harvest Statistics Data File Description

Sales figures, expansion factors, statistical estimates, and confidence bounds, for all computed combinations and levels of Location, Residency, and L/P Type (including the Res=ALL and Res=SUM estimates, and the Lpt=ALL and Lpt=SUM estimates) are stored in the **Harvest Surveys Hunting and Harvest Statistics Database**. A complete data table of LY2003 antelope hunting and harvest estimates is available from Harvest Surveys as a compressed comma separated value text file with documentation. This file can be readily imported into data handling, analysis, and presentation programs. This file is described in **Appendix B**.

Additional Antelope Hunting and Harvest Information Sources

The following additional information resources relating to LY2003 antelope hunting and harvest in Montana are available from FWP Harvest Surveys. The documents are available as Microsoft WORD or Rich-Text-Format files. The data is available as ASCII text files, either comma separated value, or flat files. Documents and data are distributed within compressed WinZip files.

- **LY2003 Antelope Hunting and Harvest Statistics Data File**. A comma separated value ASCII text file containing all the LY2003 estimates of antelope hunting and harvest statistics, at all variables and levels of analysis. (**See Appendix B.**) Currently available in a compressed WinZip file with rich text format documentation.
- **LY2003 Antelope Survey Response Data Summary Report**. A report which presents formatted tables of summarized antelope survey results, including hunter effort and success, and reported harvest and kill characteristics. These are the raw survey statistics prior to Lpt linkage and prior to statistical expansion. Currently available as a Microsoft Word document compressed in a WinZip file.
- **"Planning Your Hunt" Web data access**. A simplified version of antelope hunting and harvest statistics will be made available to the interactive "Plan Your Hunt" section of the FWP Web site in autumn of 2004.

Appendix B

2003 Pronghorn Antelope
Hunting and Harvest Statistics
Data File Description

Pronghorn Antelope
Hunting and Harvest Statistics

Description of Data File

License Year 2003

Montana Fish Wildlife and Parks

Harvest Surveys

August 17, 2004

This document contains a description of the License Year 2003 Antelope Hunting and Harvest Statistics data file. This file was exported from the original Oracle data table used to produce the tables presented in the **2003 Pronghorn Antelope Hunting and Harvest Report**. The data is available in a **Comma Separated Value ASCII text file** where character values are quoted and numeric values are not. Numeric values were exported to 3 decimal places. Headers are not included. The data file has the extension ***.Csv**. It is accompanied by a ***.sch** file which defines the file format and column types. This documentation is included in the 2003 Antelope Hunting and Harvest Report as Appendix B and as a stand alone "rich text format" document included with the compressed data file. Descriptions and column definitions for the data file are given below. See the introduction of the full report for further information and explanations of the analysis methods used to produce the statistical estimates.

PaHh03_040817.Csv – LY2003 Antelope Hunting and Harvest Statistics Data Table as generated 8/17/04

- **Loc (Location)**: **STA**=Statewide; **R01..R07,R09**=Regional 1..7,Unknown; **###**=Hunting District (100,101,…), #99=Unknown district within region. 999=Unknown district and region.
- **Res (Residency)**: **ALL**=All residencies, **R**=Residents of MT, **N**=Nonresidents, **SUM**=Sum of R+N estimates.
- **Lpt (License/Permit Type)**: **ALL**=All license/permit types combined. **License Categories** (groupings for State and Regional analysis) **C1SES**=Special licenses allowing either sex harvest. (Excluding multi-Region Lpts.) **C2SDF**=Special licenses restricted to doe/fawn harvest. (Excluding multi-Region Lpts.) **C3SAO**=Special multi-Region archery only licenses, either sex and doe/fawn. **C9UNK**=Unknown. Hunting effort or kills not assignable an Lpt held by the hunter. **License Types** (individual Lpts for District level analysis) **21500-70030**= Special Licenses issued for management purposes in a District or localized set of Districts. Either sex and doe/fawn Lpts. See **Appendix A** of the Antelope Report for a listing of the management uses of all Lpts. Also see the **2003 Hunting Regulations** booklet. **90000 & 90030**= Special multi-Region archery only licenses allowing either sex and doe/fawn harvest, respectively. **99999**=Unknown. Hunting effort not assignable to a Lpt held by the hunter and valid in the reported District, or kills not matching the sex/age or time period restrictions of held Lpts. **SUM**=Sum of estimates by License Category or License Type. Estimates of unique hunters and successful hunters (**Hunt, SucHunt**), and upper and lower confidence bounds on those estimates, cannot be summed across Lpts, because antelope hunters may hold multiple Lpts and harvest more than one antelope. These statistics at the Lpt=SUM level are adjusted to be estimates of numbers of unique hunters among all the hunters holding underlying Lpts, given the Location and Residency.
- **Sort_Loc, Sort_Res, Sort_Lpt:** Assist in sorting the records by the 3 variables defined above.
- **Sales (Number Issued)**: Number of Antelope license sales.
- **Exp_Fact (Expansion Factor)**: Number issued divided by number held by Antelope Survey respondents.
- **Hunt (Hunters)**: Point estimate of number of sportspersons actively hunting Antelope.
- **Hunt_L (Hunters Lower Bound)**: Lower 80% confidence bound on active hunters.
- **Hunt_U (Hunters Upper Bound)**: Upper 80% confidence bound on active hunters.

- **DistHunt (Districts Hunted)**: Number of Districts (multiplied by a Lpt use weighting factor) used by all active Antelope hunters. A measure of hunter effort as distributed across Lpts.
- **HDays (Hunter Days)**: Point estimate of number of days or partial days spent hunting Antelope by all hunters.
- **HDays_L (Hunter Days Lower Bound)**: Lower 80% confidence bound on hunter days.
- **HDays_U (Hunter Days Upper Bound)**: Upper 80% confidence bound on hunter days.
- **SucHunt (Successful Hunters)**: Point estimate of number of active hunters taking one or more Antelope.
- **SucHunt_L (SucHunt Lower Bound)**: Lower 80% confidence bound on successful hunters.
- **SucHunt_U (SucHunt Upper Bound)**: Upper 80% confidence bound on successful hunters.
- **Harv (Harvest):** Point estimate of number of Antelope harvested.
- **Harv_L (Harv Low Bnd)**: Lower bound of 80% confidence interval on harvest.
- **Harv_U (Harv Up Bnd)**: Upper bound of 80% confidence interval on harvest.
- **PctSucc (Percent Success)**: Percent of hunters that were successful (harvested 1 or more Antelope).
- **HarvU (Harvest Unknown):** Point estimate of Antelope harvested of sex/age class unknown.
- **HarvY (Harvest Young):** Point estimate of Antelope harvested of sex/age class young of year.
- **HarvF (Harvest Female):** Point estimate of Antelope harvested of sex/age class non-young females.
- **HarvM (Harvest Male):** Point estimate of Antelope harvested of sex/age class non-young males.
- **TP_U (Kill Time Unkn):** Estimate of Antelope harvested where time period was unknown.
- **TP_1 (Kill Time Period 1):** Estimate of Antelope harvested during pre-season.
- **TP_2 (Kill Time Period 2):** Estimate of Antelope harvested during 1st week of general season.
- **TP_3 (Kill Time Period 3):** Estimate of Antelope harvested during 2nd week.
- **TP_4 (Kill Time Period 4):** Estimate of Antelope harvested during 3rd week.
- **TP_5 (Kill Time Period 5):** Estimate of Antelope harvested during 4th week.
- **TP_6 (Kill Time Period 6):** Estimate of Antelope harvested during post-season.

Various meaningful ratios and percents further describing Pronghorn Antelope hunting and harvest can be computed based on these provided statistics. Please refer to the **LY2003 Antelope Hunting and Harvest Report** for definitions of these ratios and percents and examples of their use.

Pronghorn Antelope Hunting and Harvest Statistics were computed for certain combinations and groupings of values of the 3 variables Loc, Res, and Lpt:

Loc	Res	Lpt	Explanation
STA	ALL	ALL	Statewide, combined res and lic category.
STA	R&N	ALL	Statewide, by res, combined lic category.
STA	ALL	Lp_Cat	Statewide, combined res, by lic category.
STA	R&N	Lp_Cat	Statewide, by res and lic category.
STA	SUM	Lp_Cat	Statewide, summed res, by lic category.
STA	R&N	SUM	Statewide, by res, summed lic category.
STA	SUM	SUM	Statewide, summed res and lic category.
R01..R07,R09	ALL	ALL	Regional, combined res and lic category.
R01..R07,R09	R&N	ALL	Regional, by res, combined lic category.
R01..R07,R09	ALL	Lp_Cat	Regional, combined res, by lic category.
R01..R07,R09	R&N	Lp_Cat	Regional, by res and lic category.
R01..R07,R09	SUM	Lp_Cat	Regional, summed res, by lic category.
R01..R07,R09	R&N	SUM	Regional, by res, summed lic category.
R01..R07,R09	SUM	SUM	Regional, summed res and lic category.
Hdist ###ALL	ALL		By District, combined res and lic type.
Hdist ###R&N	ALL		By District, by res, combined lic type.
Hdist ###ALL	Lp_Type		By District, combined res, by lic type.
Hdist ###R&N	Lp_Type		By District, by res and lic type.
Hdist ###SUM	Lp_Type		By District, summed res, by lic type.
Hdist ###R&N	SUM		By District, by res, summed lic type.
Hdist ###SUM	SUM		By District, summed res and lic type.

2003 ANTELOPE

Our records show that you were issued a license to hunt antelope in Montana in 2003. The license(s) issued are shown on the address label to the left. Please record ALL of your **OWN** antelope rifle and archery hunting activity in Montana during this past 2003 antelope hunting season regardless of your license type. The information you provide will be used for management purposes. Thank You.

1. Did you hunt Antelope in Montana in the 2003 hunting season?..... ○[1] **NO** ○[2] **YES**

If YES, please complete the following:

2. List up to 3 antelope hunting districts you hunted most for antelope and the total days hunted in each for all of your own antelope rifle and archery hunting activity → (See Antelope Hunting District Map)

Antelope Hunting District Number	No. Days Hunted

3. How many antelope did you kill in Montana in 2003? .....

Please complete the following sections for each Antelope killed (up to three) during 2003.

ANTELOPE NO. 1

4. In which antelope hunting district did you kill this antelope? ..... *ANTELOPE HUNTING DISTRICT*

5. Antelope killed was a: ○[1] **FAWN** ○[2] **ADULT DOE** ○[3] **ADULT BUCK**

6. Antelope was killed during which time period?

○[1] **Before Oct 12** ○[2] **Oct 12 - 19** ○[3] **Oct 20 - 26** ○[4] **Oct 27 - Nov 2** ○[5] **Nov 3 - Nov 9** ○[6] **After Nov 9**

ANTELOPE NO. 2

4. In which antelope hunting district did you kill this antelope? ..... *ANTELOPE HUNTING DISTRICT*

5. Antelope killed was a: ○[1] **FAWN** ○[2] **ADULT DOE** ○[3] **ADULT BUCK**

6. Antelope was killed during which time period?

○[1] **Before Oct 12** ○[2] **Oct 12 - 19** ○[3] **Oct 20 - 26** ○[4] **Oct 27 - Nov 2** ○[5] **Nov 3 - Nov 9** ○[6] **After Nov 9**

ANTELOPE NO. 3

4. In which antelope hunting district did you kill this antelope? ..... *ANTELOPE HUNTING DISTRICT*

5. Antelope killed was a: ○[1] **FAWN** ○[2] **ADULT DOE** ○[3] **ADULT BUCK**

6. Antelope was killed during which time period?

○[1] **Before Oct 12** ○[2] **Oct 12 - 19** ○[3] **Oct 20 - 26** ○[4] **Oct 27 - Nov 2** ○[5] **Nov 3 - Nov 9** ○[6] **After Nov 9**
